Summary

Full-stack engineer with eight years building data-heavy web products. Comfortable owning a feature from API design to production deployment, and most useful on small teams where a single person ships the whole stack.

Experience

Senior Software Engineer

Remote

GLOBEX

Jun 2023 — Present

- Led the migration of the billing pipeline to event-sourced architecture, reducing reconciliation incidents by 80% across three regions.
- Designed and shipped the public webhooks API used by 1,200+ integrations; built rate limiting, replay, and idempotency from scratch.
- Mentored four engineers through their first quarter, two of whom were promoted within the year.

Software Engineer

San Francisco, CA

ACME DATA

Aug 2020 — May 2023

- Built a streaming ingest service in Go that processes 2.4 billion events per day at p99 < 50ms.
- Cut analytics dashboard load time from 9s to 1.1s by introducing materialized views and a Redis cache layer.
- Owned the on-call rotation for the ingest team; reduced page volume 60% through better alerting thresholds and runbooks.

Software Engineer (Junior)

Austin, TX

INITECH

Jul 2018 — Jul 2020

- Shipped the customer self-serve refunds flow, removing 120 weekly support tickets.
- Wrote the team's first end-to-end test suite (Playwright); caught three regressions before launch.
